The subject matter of claim 1 does not appear to be novel with respect to D1.

Claim 1 relates to "a heat exchanger header tank comprising a header forming plate, a tube connecting plate and an intermediate plate interposed between the two plates, the header forming plate, the tube connecting plate and intermediate plate being arranged in superposed layers and brazed to one another". Such "a heat exchanger header tank" appears to be known from D1 (see page 9, line 13 to page 13, line 14, Figs 1 to 4).

The subject matter of claim 2 does not appear to involve inventive steps in view of the document 1 and the document 2 cited in the ISR.

A skilled person in the art would easily conceive the idea of applying the technical feature "press forming" employed in D2 to "the fluid chambers (28, 46), the manifold (16) and the manifold plate (22)" disclosed in D1.

## Supplemental Box

In case the space in any of the preceding boxes is not sufficient.

Continuation of: V

The subject matter of claim 3 does not appear to involve inventive steps in view of the document 1 and the document 2.

The technical feature "each of opposite side edges of the manifold (16)" in D1 and the feature "the plate section 160 is integrally provided at each of opposite side edges thereof with the gripping section 162 covering a boundary between the tank section 150 and the intermediate plate section 170 over the entire length thereof, and the gripping section 162 is brazed to corresponding side faces of the tank section 150 and the intermediate plate section 170" in D2 are concerned with mutually related technical fields. A skilled person in the art would easily conceive the idea of employing the feature in D1 to substitute the feature disclosed in D2.

The subject matter of claim 4 does not appear to involve inventive steps in view of the document 1 and the document 2.

The technical feature "each of opposite side edges of the manifold (16)" in D1 and the feature "the gripping section 162 is integrally provided at an outer end thereof with an outer surface of the tank section 150 and brazed to the tank section 150" in D2 are concerned with mutually related technical fields. A skilled person in the art would easily conceive the idea of employing the feature in D1 to substitute the feature disclosed in D2.

The subject matter of claim 18 does not appear to involve inventive steps in view of the document 1 and the document 2.

The technical feature "a heat exchanger header tank is folded temporary relation of the assembly with a view to the brazing" is disclosed in D1. The technical feature "Solder is provided on the tank section 150 on the plate 160 side. On both side of the plate section 160, solder is previously clad. The intermediate plate section 170 is made of a bare plate member." is disclosed in D2.

The subject matters of claim 19-22 do not appear to involve inventive steps in view of the document 1 and the document 2.

The technical feature "a heat exchanger" in D1 and the features "the gas cooler comprising a heat exchanger according to claim 19-22, etc." in D2 are concerned with mutually related technical fields. A skilled person in the art would easily conceive the idea of employing the feature in D1 to substitute the feature disclosed in D2.

The subject matters of claim 5-12 are neither disclosed in any of the documents cited in the ISR nor obvious to a person skilled in the art.
